Agile SDLC

EDUCATION

BACHELOR OF SCIENCE

Molecular Biology
Radford University

Design Training
The Iron Yard
Spring 2017

PROFESSIONAL PROFILE

My objective is to leverage my development experience, communication and technical skills to obtain a position as a scrum master or an analyst. I have been operating as a de facto analyst during my tenure as a financial advisor. I met with my clients to determine what they wanted to achieve in retirement. By listening to their ideas and concerns I was able to formulate a vision. A retirement plan is a corollary to the Waterfall SDLC Model, with the flexibility of the Agile Model. Life is unscripted, consequently a retirement plan has to be both predictive and adaptive.

EXPERIENCE

FREELANCE /2017-PRESENT

- Collaborated with the project leader to create a JSON-generated form for a local company which was used by field representatives to place orders and update client information.
 - Used git version control to manage software development.
 - The form needed to be customizable due to the large number of products offered by the company.
 - The form was dynamically generated based on the salesman's unique identifier, thus eliminating the number of unnecessary input fields, speeding up the order process and significantly reducing order-processing errors.
- Built websites using WordPress and SquareSpace.
 - The WordPress sites used basic templating with no custom javascript and involved non-profit sites as well as financial services.
 - The SquareSpace site is for a local non-profit with custom javascript (such as adding the logo to the thank you email) per the client's request.
- Collaborated on the "Clean Marine" App as a final project for code school.
 - Used git version control to manage multiple users.
 - Used Slack to communicate between two front-end and one back-end developers.
 - Used Trello boards to maintain the requirements backlog.
 - Participated in daily stand-ups and followed the agile method.
 - Presented the app in front of approximately 50 attendees, translating the technical concepts of the programming languages and technologies used to a non-technical audience.

FINANCIAL ADVISOR

Wells Fargo, North Charleston, SC / 2014 – 2016

- Conducted educational seminars for groups of investors, including four MLS soccer organizations where I was the public speaker.
- Provided client-facing estate planning and management.

FINANCIAL ADVISOR

Edward Jones, North Charleston, SC / 2012 – 2014

Similar to above.

OWNER/OPERATOR

Dermatopathology Specialists, Mount Pleasant, SC/ 2008 – 2012
